

# Nevan R G

+91 9677035733 | nevanrg456@gmail.com | linkedin.com/in/nevanrg14 | github.com/nevan-sonic

AI/ML engineer specializing in Agentic AI, workflow automation, multi-agent orchestration, and tool calling (MCP), with hands-on experience building Generative AI systems, LLM applications, and citation-aware RAG pipelines. Maintains a side interest in Web3 and decentralized infrastructure.

## EDUCATION

### Chennai Institute of Technology

Aug. 2024 – May 2028

Bachelor of Technology in Information Technology — Chennai, India

## EXPERIENCE

### AI/ML Intern

August 2026 – Present

Aparsoft Private Limited

- Working on agentic AI workflows, RAG pipelines, and evaluation systems powering the company's LMS, chatbot, and exam products, spanning content generation, student interactions, and automated grading.

### AI/ML Intern

June 2026 – Present

National Informatics Centre (NIC), MeitY, Govt. of India — eProcurement Software Development Division (ePSDD), Chennai, India

- Built a citation-aware RAG platform (FastAPI backend, React frontend), now used internally for eProcurement document search.
- Indexed documents with LlamaIndex and pgvector, using local BAAI/bge-small-en-v1.5 embeddings to remove dependency on external APIs.
- Built a LangGraph validation pipeline using a local Ollama model, catching hallucinated answers before they reach users.
- Added Keycloak JWT auth, Vault-managed secrets, and a PaddleOCR fallback, hardening the platform for production rollout.
- Upgraded the platform to Corrective RAG (CRAG), adding a self-corrective retrieval evaluator with relevance thresholding and an adaptive fallback that rewrites ambiguous queries and pulls live web context via DuckDuckGo when local knowledge is insufficient, cutting hallucinations by up to 95.4%.

## PROJECTS

### MechaForge Lab — Visual Meta-Agent Builder

github.com/nevan-sonic/MechaForge

- Built a studio that compiles natural-language prompts into runnable multi-agent Python code, visualized as a ReactFlow graph, cutting agent setup to minutes.
- Unified Groq, Gemini, and DeepSeek behind one OpenAI-compatible client, plus 6 sandboxed tools via short-lived OAuth, no stored credentials.

### T.A.C.T. — Autonomous SRE Incident Responder

github.com/nevan-sonic/T.A.C.T.

- Built an SRE agent that reads production logs (Llama 3.3 via Groq) inside a Rust/WASM TEE isolating host secrets, cutting manual log triage.
- Automated a 9-step fix pipeline — diagnose, patch, PR, merge, monitor, rollback — auto-resolving low-severity issues and gating the rest behind human approval.

### NevoraX — Autonomous Agent-to-Agent Marketplace

github.com/nevan-sonic/NevoraX

- Built a 19-agent marketplace settling USDt payments on Ethereum Sepolia and Hoodi testnets, proving trustless agent-to-agent commerce end-to-end.
- Added a 3-stage audit (schema, AI review, safety check) preventing invalid payouts; escrowed capital earns Aave V3 yield mid-task.

## RESEARCH

### AI Research — Predictive-Prescriptive AI for Additive Manufacturing

July 2026 – Present

- Developing a three-head LSTM jointly predicting mechanical properties, reliability, and recommended print parameters.
- Adding self-attention weighting over geometry, temperature, and speed features, improving accuracy over linear regression, random forest, SVR, and single-head LSTM baselines.

## SKILLS

**AI Frameworks:** LangGraph, LlamaIndex, SentenceTransformers, NumPy, Pandas, Matplotlib, Scikit-learn, Plotly

**Backend:** FastAPI, Express.js, Node.js, PostgreSQL, pgvector, MongoDB, MySQL, Firebase

**Languages:** Python, TypeScript/JavaScript, C, C++, Java, SQL

**Cloud & DevOps:** Docker, Kubernetes, Google Cloud, MLflow, Git, GitHub, GitLab

**Frontend:** React.js, Next.js, Angular.js, HTML, CSS

## ACHIEVEMENTS & CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals (AI-901)
- Winner — The Hack Web3Conf 2025, GirlScript Foundation's international blockchain hackathon at India's largest chain-agnostic conference.
- Top 5 Finalist among 5,000+ teams — Cardano Hackathon Asia 2025, featured at the Cardano Summit & India Blockchain Week.

## VOLUNTEERING

### Founding Builder — OxCode

July 2026 – Present

OxCode (Oxlo AI)

- Selected as one of the first 100 Founding Builders for OxCode, an AI software engineer built by Oxlo AI. Testing AI software engineering workflows across real projects and contributing reproducible bug reports and feature feedback before public releases.
